Hello,

I hope you're doing well! Here you have next epics:

EPIC 3: Teams & Boards

Story 3.1 – Create team

As a user

I want to create a team

So that I can collaborate with others

Note: As it was said previously, teams can be inserted directly into DB. You can of course add possibility for admin users to manage teams directly (create, update, delete) as an additional to assigning users to the teams. That's optional.

Story 3.2 – Manage team members - OPTIONAL, but recommended

As a team owner/admin

I want to add/remove users to/from a team

So that proper access control is maintained

Story 3.3 – Team boards

As a team member

I want to have a dedicated board per team

So that I can see relevant work

Acceptance Criteria:

- Each team has its own board
- Only team members can access it

Note: user who belong to several teams should be able to select and see each team's board.

EPIC 4: Product Backlog & Sprint Board

Story 4.1 – Product backlog

As a user

I want to see all items in a backlog
So that I can plan work

Acceptance Criteria:

- All items visible
- Items in "To Do" state appear here

Story 4.2 – Sprint board view

As a team member

I want to see items grouped by status
So that I can track progress

Acceptance Criteria:

- Columns for states:
 - Ready
 - In Progress
 - Code Review
 - In Test
 - Ready for Production
 - Done
- "To Do" items NOT shown here

Note: A simple dropdown with the possibility to set state on the ticket is fine. After the state is changed, ticket should be moved to another column that reflects new state. You can add drag&drop functionality to move tickets between columns, but that's optional.
