Cc Migasiewicz, Klaudia <klaudia.migasiewicz@capgemini.com>

Hello,

Another piece of the project's tasks. This is the last part. If it's not enough, you can freely continue the work on the board, making your own enhancements.

EPIC 7: Board Behavior

Story 7.1 – Items grouped by state

As a user

I want items displayed in columns

So that board is intuitive

Story 7.2 – Drag & drop movement (optional advanced)

As a user

I want to move items between states easily

So that workflow is efficient

EPIC 8: Authorization (Security)

Story 8.1 – Team-based visibility

As a user

I want to only see my team's data

So that information is isolated

Story 8.2 – Access control

As a system

I want to restrict access to resources

So that unauthorized actions are prevented

Note: There are plenty of possibilities. Simple authentication based on the login + password and session tracking using cookie or local storage is a basic example, but you can freely go with something more secure and reliable.

Best regards,
Bartłomiej Wasiuk

Subject: Re: [Angular upskilling program] Practical task - Epic 5 & 6

Hello,

I hope you're doing well! Here you have next epics:

EPIC 5: Items (Tasks)

Story 5.1 – Create item

As a user

I want to create tasks

So that work can be tracked

Acceptance Criteria:

- Item belongs to a team
- Only visible to that team

Story 5.2 – Item types

As a user

I want to classify items

So that I can distinguish work types

Supported types:

- Epic
- Story
- Defect

Story 5.3 – Item states

As a user

I want items to move through states

So that I can reflect progress

States:

- To Do
- Ready
- In Progress
- Code Review
- In Test
- Ready for Production
- Done

Story 5.4 – Assign user to item

As a user

I want to assign work

So that responsibility is clear

Story 5.5 – Estimation

As a user

I want to estimate tasks

So that effort is visible

Acceptance Criteria:

- Estimation in story points or hours
- Optional but required before progress

EPIC 6: Workflow Rules

Story 6.1 – Estimation required before starting

As a system

I want to enforce estimation before moving from "To Do"

So that planning discipline is followed

Acceptance Criteria:

- Cannot move item out of "To Do" without estimation

Story 6.2 – WIP limits per state

As a team

I want to limit number of items per state

So that workflow is balanced

Acceptance Criteria:

- Configurable max items per state (except "To Do")
- Prevent adding items if limit exceeded
